

## Honey-buzzard Counts in UK by Month from 1996-2011

These counts are taken from the series assembled for 1996-2011 as available from the Home Page under Trends in Honey-buzzard Movements.

	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Total
1996		25	28	9	11	26	0		99
1998	0	20		11	16	40	29		116
1999		31	17	8	23	40	5		124
2000	1	19	6	6	22	635	125		814
2001	3	62	23	14	39	57	20	0	218
2002	5	64	32	19	46	76	4	0	246
2003	2	54	33	21	36	103	8	0	257
2004	10	64	29	28	47	50	5	0	233
2005	5	64	26	11	31	69	4	0	210
2006	9	51	19	23	30	122	21	0	275
2007	17	44	29	19	47	50	15	0	221
2008	14	75	27	19	31	898	19	0	1083
2009	7	77	33	21	63	117	16	1	335
2010	9	65	28	20	62	91	24	0	299
2011	22	63	38	31	59	64	19	1	297
Average	8.0	51.9	26.3	17.3	37.5	162.5	20.9	0.2	321.8

Note 1

Note 2

### Notes

- 1 The figure available in 2000 is 610-910 for both the months of September and October. Fraser & Rogers (2002) found from exact dates for 1,611 individuals, that 1,277 (79.3%) were recorded in the last ten days of September and 240 (14.9%) in the first week of October. So this leaves 94 for the remainder of October. The Sussex Ornithological Society reported preliminary totals of 378 for September and 50 for October.  
For a working figure the total for September and October combined has been split roughly 5:1 giving 510-760 for September and 100-150 for October.
- 2 Where a range is given for the count for a month, the midpoint of the range is used in calculating the average.  
Blank entries are not included in the calculations.
