

# Family History through DNA: Help or Hindrance

Nick Rossiter

# Overview

- DNA basics: what do we inherit
- Use for family historians
  - Genetic astrology
  - Genetic genealogy
- Examples of application of genetic genealogy
- Discussion
  - What is learnt
  - Uncertainties that remain

# DNA Basics

- DNA is Deoxyribonucleic acid
- Molecule carrying genetic instructions
  - development, functioning and reproduction of all known living organisms
- Within cells, DNA is organized into long structures called chromosomes
  - The Y chromosome is one of two sex chromosomes in mammals (other is X)
- Organisms store most of their DNA inside the cell nucleus and some of their DNA in organelles (specialised subunits), such as mitochondria
  - Mitochondria produce energy from glucose

# DNA Basics 2

- Except for identical twins, each person's DNA is unique
- The zygote, new organism in reproduction, inherits DNA
  - One set of chromosomes from each parent

# Genes

- A gene is a length of DNA that codes for a specific protein e.g. insulin
- Genes are the basic unit of genetics
- Human beings have 20,000 to 25,000 genes (about 3% of our DNA)

# Number of Ancestors

- Number of ancestors builds up rapidly
- Exponential rate of increase (power of 2)
- So 10 generations back,
  - You have  $2^{10}$  ancestors, that is 1,024 people
  - That's perhaps in 250-300 years
- 20 generations back,
  - $2^{20}$  ancestors, that is 1,048,576 people
  - That's perhaps in 500-600 years

# Implications

- Cousin marriages, marriages in small communities mean build up not (nearly) as fast as this
- Indeed some people calculate the whole of the planet is related if you go back 3,500 years
- Population of England was 3 million in 1530
  - So very significant 'inbreeding'
- At 15 generations back, ancestors =  $2^{15}$  or 32768 people, more than the 20,000-25,000 genes we have
  - So some ancestors must be left out!
  - That's in 375-450 years

# Inherited DNA

- Most of what we inherit through the generations is a mishmash of the DNA of our ancestors
- But 2 components endure throughout:
  - In Y-Chromosome
    - the father-of-father characteristics is preserved
    - no tests are available on female side
  - In Mitochondria
    - the mother-of-mother characteristics is preserved
    - sons inherit their mother's mtDNA but cannot pass it on
- Inheritance is usually faithful but at intervals mutations occur
  - Such mutations 'label' populations and migrations

# DNA Profiling

- The lengths of variable sections of repetitive DNA, such as short tandem repeats (STR)/mini-satellites, are compared between people
- STR change relatively frequently between generations (finer-tuning)
- Also look at Y-Chromosome and Mitochondria (coarser-tuning)
- Much used in paternity/maternity testing
  - Important financial motivation
- Uniqueness of DNA gives major forensic uses
- How can genetic genealogy benefit?

# Genetic Genealogy

- On male side places ancestors in a Y-Haplogroup (population with same markers in Y-Chromosomes) – 2,500-4,000 years ago
- On female side places ancestors in a mtDNA Haplogroup (population with same markers in mitochondria) – 2,500-4,000 years ago
- On both male and female side compare STR markers against populations 'known' to be carrying such markers – 500-2,000 years ago
- In all methods, take into account documentary records (traditional genealogy)

# How it Works

- You
  - Take a swab from the inside of your cheek
  - Place it in a container
  - Send container off in a supplied envelope
  - Enclose some \$!
- They
  - Receive the swab
  - Create an account for tracking and placing results
  - Perform some DNA analysis
  - Transfer results to your on-line account

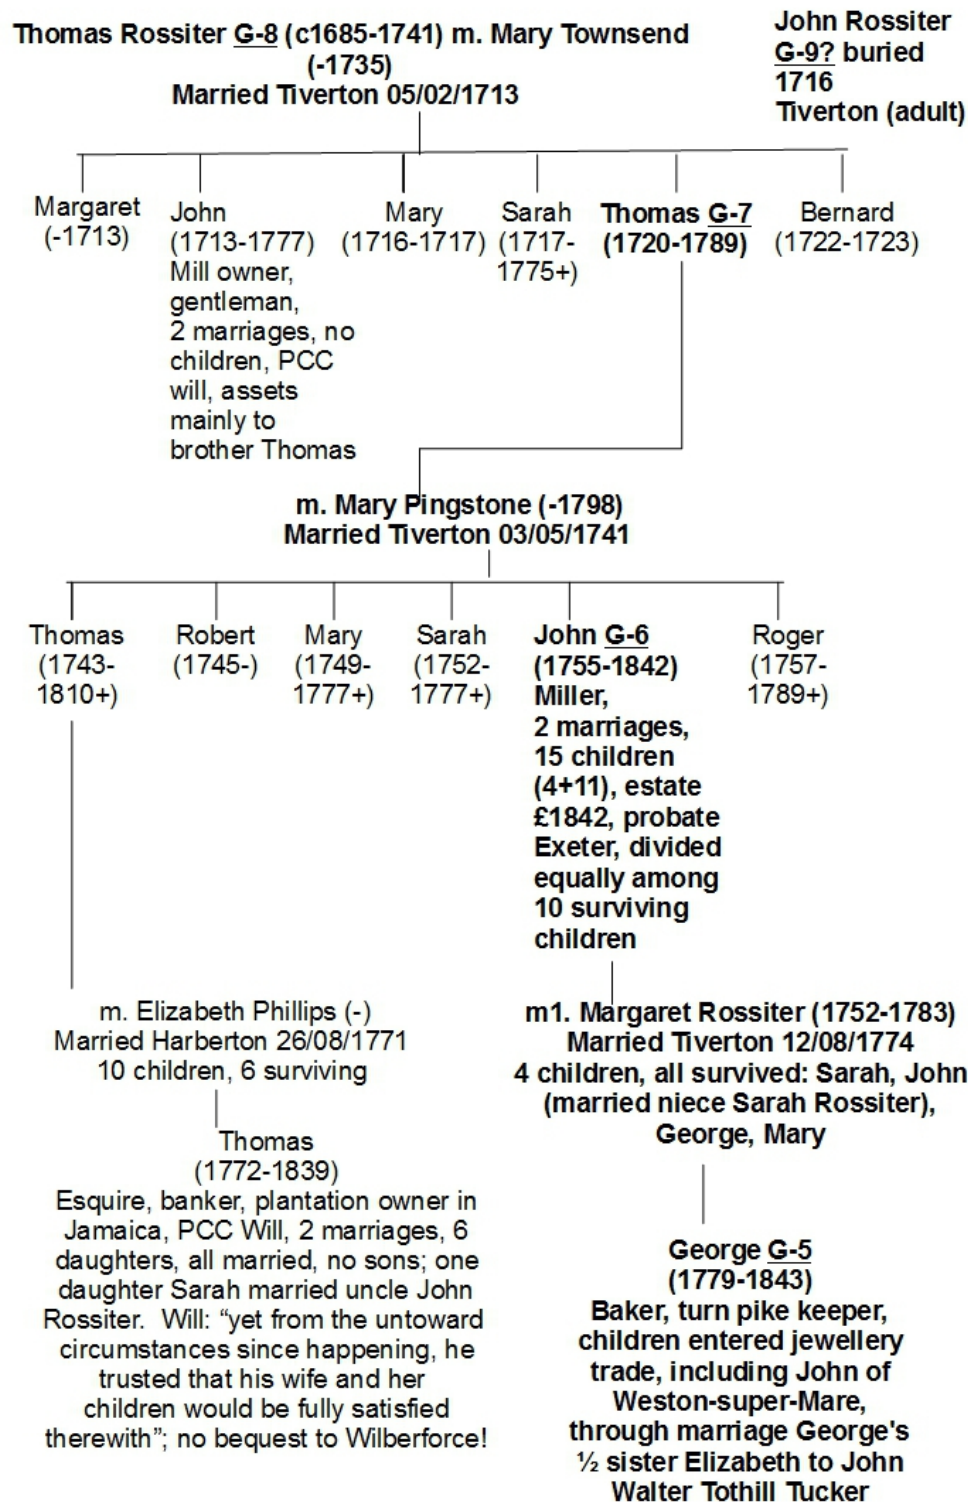

# Examples

- Male side – mine (well documented with missing link before DNA tests)
  - Surname constant over generations
- Female side – mine (poorly documented before DNA tests).
  - Surname changes every generation

# Male side

- Teignmouth (Devon)
  - Back to grandfather George (1876-1946), gt-grandfather Ebenezer (1848-1888), jewellers, 3 generations back
- Weston-super-Mare (Somerset)
  - Back to gt-gt-grandfather John (1811-1893), jeweller, 4 generations back
- Tiverton (Devon)
  - Back to gt-gt-gt-gt-gt-gt-grandfather Thomas (c1685-1741), 8 generations back

Family Tree  
of Thomas  
Rossiter  
(c1685-1741)  
and Mary  
Townsend of  
Tiverton, Devon

# Properties of Family

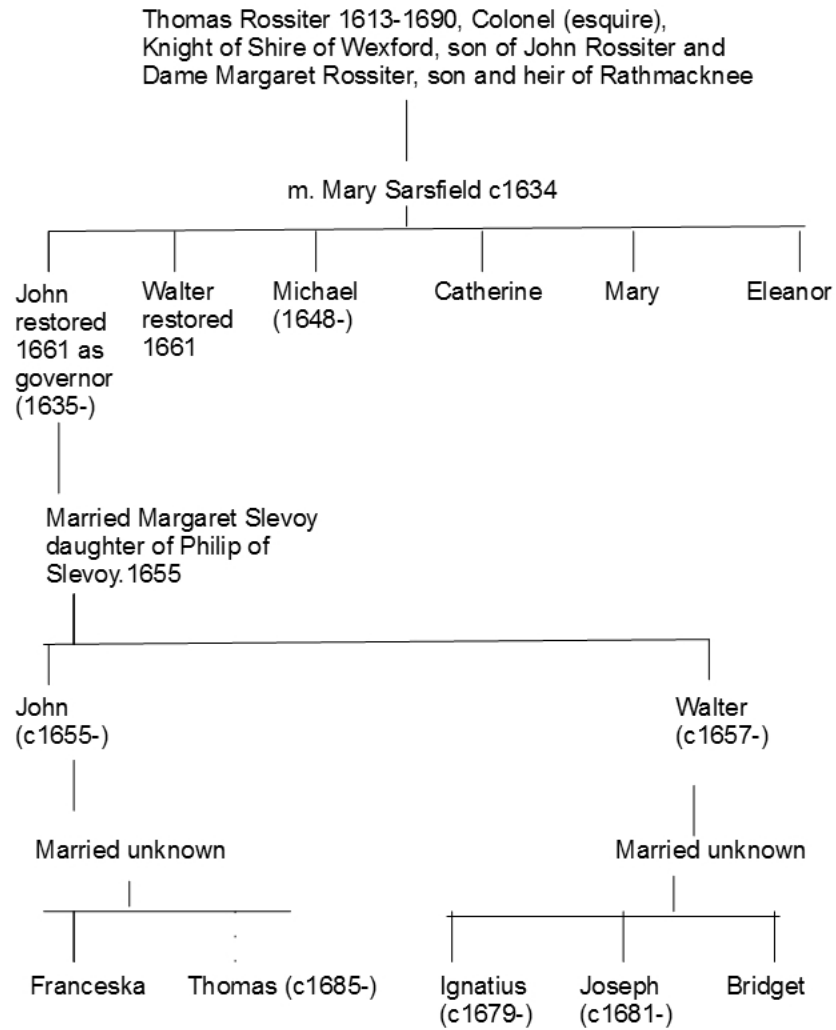

- Liked names John, Thomas, Margaret; Church of England
- Prosperous by 2<sup>nd</sup> generation in Tiverton
  - Mill owners, slave trade
- No obvious connection to other SW families
  - Main family prior of Edward Rossiter (Combe St Nicholas, Somerset) had emigrated to Boston on Mary & John in 1630 (puritans, 17 in his party)
- Pioneer Thomas may have been a little raw:
  - Appeared before Bishop of Exeter in 1713 with wife on charge of prenuptial fornication!

# Speculation about an Irish Connection

- Rossiter is an Irish name, fairly common in Wexford (Leinster)
- Is there any link?
- Rathmacknee is centre of family's influence
- 'Well-established' landowners
  - Arrived with Strongbow in 1169 ('Normans')
  - de Roucestre (of Rochester, land owners in eastern England and Boulogne)
- Names: John, Thomas, Margaret
- Catholics

# Family Tree of Thomas Rossiter (1613-1690) and Mary Sarsfield of Wexford, Leinster

1641: Thomas Rossiter joined rebellion against English as part of Leinster forces

1649: Cromwell defeats rebellion. Thomas Rossiter has his lands confiscated and is transplanted to Connaught

1661: Some restoration in Ireland of estates on end of Cromwell era and restoration of Charles II. Return to Rathmacknee of sons of Thomas and Mary: John acting Governor of Rathmacknee while his father was away at wars, Walter, together with their children

1691: Rathmacknee lost for good to protestants

# Rathmacknee Castle, Wexford

# Rathmacknee Castle sign

RATHMACKNEE CASTLE  
CAISLEÁN RÁTH MHIC NAOI

This castle was probably erected by John Rosseter around 1450. The tower and bawn are well preserved and give a good idea of what many other similar towers throughout the Irish countryside must once have looked like when they were complete.

Is dócha gurbh é Seán Rosaitear a thóg an caisleán seo timpeall na bliana 1450. Tá bail mhaith ar an túr agus ar an mbábhún agus tugann siad barúil mhaith do dhuine cad leis a raibh a leithéidí eile ar fud na tíre cosúil nuair a bhí siad slán.

Plaque erected by  
Bord Fáilte Éireann  
1077/173

## CUP GLORY FOR WEXFORD

Youths Women are spot-on in Aviva Stadium showpiece game

<b>Shelbourne Ladies FC</b> Killeen 55, Beirne 110	<b>2</b>
<b>Wexford Youths Women</b> Rossiter 90+5, Delahunty 105	<b>2</b>
Youths won 4-2 on pens	

by Michael Carthy

ON A day of amazing drama, Wexford Youths Women claimed the WFAI Cup for the first time following a penalty shoot-out after they had finished 2-2 with Shelbourne at a rain-lashed Aviva Stadium on Sunday.

Will Doyle's team had shown their fighting spirit when battling back from a goal down to grab an equaliser in the fifth minute of time added on and bring the game to extra time.

They then took the lead, only for Shels to equalise right on the stroke of extra time and force a penalty shoot-out.

Neither team created much in the opening 15 minutes of the game, then Youths had a great chance when Claire O'Riordan duped Shauna Newman before Clara Rossiter struck a dangerous ball across the face of the Shels' goal.

Shelbourne's Noelle Murray flicked on Shauna Newman's delivery towards the front post, but Wexford keeper Mary Rose Kelly saved well.

Jamie Finn's shot from the edge of the box then went the

wrong side of the Youths goal. Claire O'Riordan fired wide from Emma Hansberry's corner just before the half-hour mark. Youths then had to replace injured goalkeeper Mary Rose Kelly with Tamara Furlong.

Youths finished the half on the attack with Clara Rossiter forcing Niamh Reid Burke into making a great save.

The rain continued to pour down as the second half got under way, and Shels took the lead when Siobhan Killeen cut in from the left before firing over the Wexford goalkeeper's head and into the roof of the net from 20 yards out.

Youths had penalty claims turned down when Keena Keenan made two brave tackles inside her area and after that, play was end to end.

Shels' Niamh Walsh and Rachel Graham fired wide while Claire O'Riordan was off target for Youths. With both sides beginning to tire, Youths almost scored a leveller when captain Kylie Murphy headed off the crossbar following an Emma Hansberry free kick.

Less than two minutes later, Wexford had another

great chance to equalise, but Claire O'Riordan head wide from close range.

Noelle Murray brought a great save from Wexford keeper Tamara Furlong, then, just when it was looking likely that the trophy would

be staying in Dublin, Youths grabbed an equaliser in the fifth minute of additional time when an Emma Hansberry free kick was saved by Reid Burke before Carol Breen hit the post and Clara Rossiter got the final touch.

Youths were threatening in extra time and Emma Hansberry grabbed an equaliser in the fifth minute of additional time when an Emma Hansberry free kick was saved by Reid Burke before Carol Breen hit the post and Clara Rossiter got the final touch.

goalkeeper into a good stop in the second period of extra time before Youths took the lead when Maria Delahunty volleyed home from the edge of the box following a corner kick.

But there was more twists

to come as Casey McQuillan's side grabbed an equaliser when Jamie Finn headed off the crossbar before Rebecca Creagh's shot found Dearbhla Beirne free at the back post to slot home with time almost up.

It was then on to penalties and Ruth Fahy, Rianna Jarrett, Claire O'Riordan and Kylie Murphy scored from the spot to give Youths cup glory after Tamara Furlong had saved from Noelle Murray and Shauna Newman hit the crossbar.

**Shelbourne Ladies:** Niamh Reid Burke, Keena Keenan, Niamh Walsh, Pearl Slattery (capt.), Shauna Newman, Siobhan Killeen (Dearbhla Beirne 85), Rachel Graham (Lauren Dwyer 68), Jamie Finn, Grace Murray (Sarah Rowe 59), Rebecca Creagh, Noelle Murray. Subs Not Used: Amanda McQuillan, Fiona Donnelly, Avril Brierley, Sinead Taylor.

**Wexford Youths:** Mary Rose Kelly (Tamara Furlong 32), Nicola Sinnott, Ruth Fahy, Edel Kennedy, Clara Rossiter, Linda Douglas (Maria Delahunty 61), Kylie Murphy (capt.), Emma Hansberry, Aisling Frawley (Rianna Jarrett 77), Carol Breen, Claire O'Riordan.

**Subs Not Used:** Oriath Connolly, Jessica Gleeson, Becky Caslin, Rachel Hutchinson.

**Referee:** Paula Brady. **Assistant Referees:** Michelle O'Neill, Natasha Valentini. **Fourth Official:** Deirdre Nolan.

# Fortunes of Catholics in Ireland

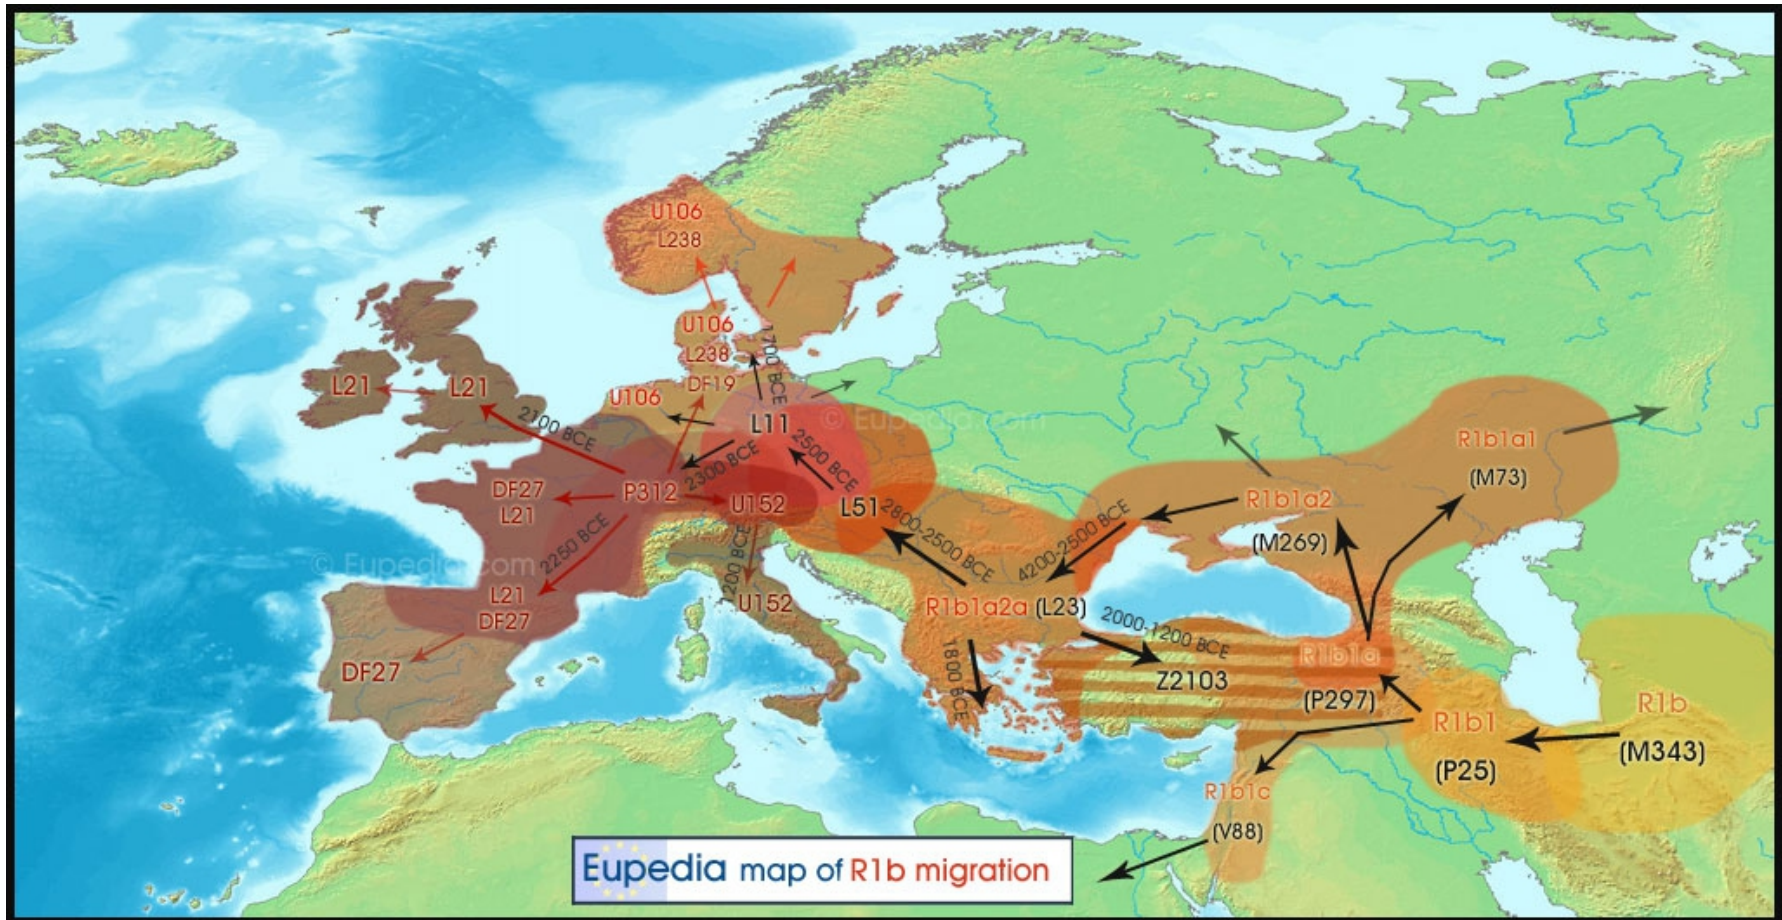

- Old gentry was Catholic
- New gentry was Presbyterian Church of Ireland, started in Elizabeth I times (plantations)
- Cromwell invaded Ireland (battles Rathmines, Drogheda, Wexford 1649-50) and dispossessed Catholics
- Charles II 1660s granted significant restorations to Catholics (about 1/3)
- William of Orange invaded Ireland 1688-91 (battles Boyne, Limerick)
- Initial Treaty of Limerick 1691 was relatively fair to Catholics, but was not ratified by protestant parliament
- Penal laws, from 1690s, dispossessed nearly all Catholics for good
- Flight of the Wild Geese 1691: Jacobite Army with dependants left Ireland for France, under Patrick Sarsfield

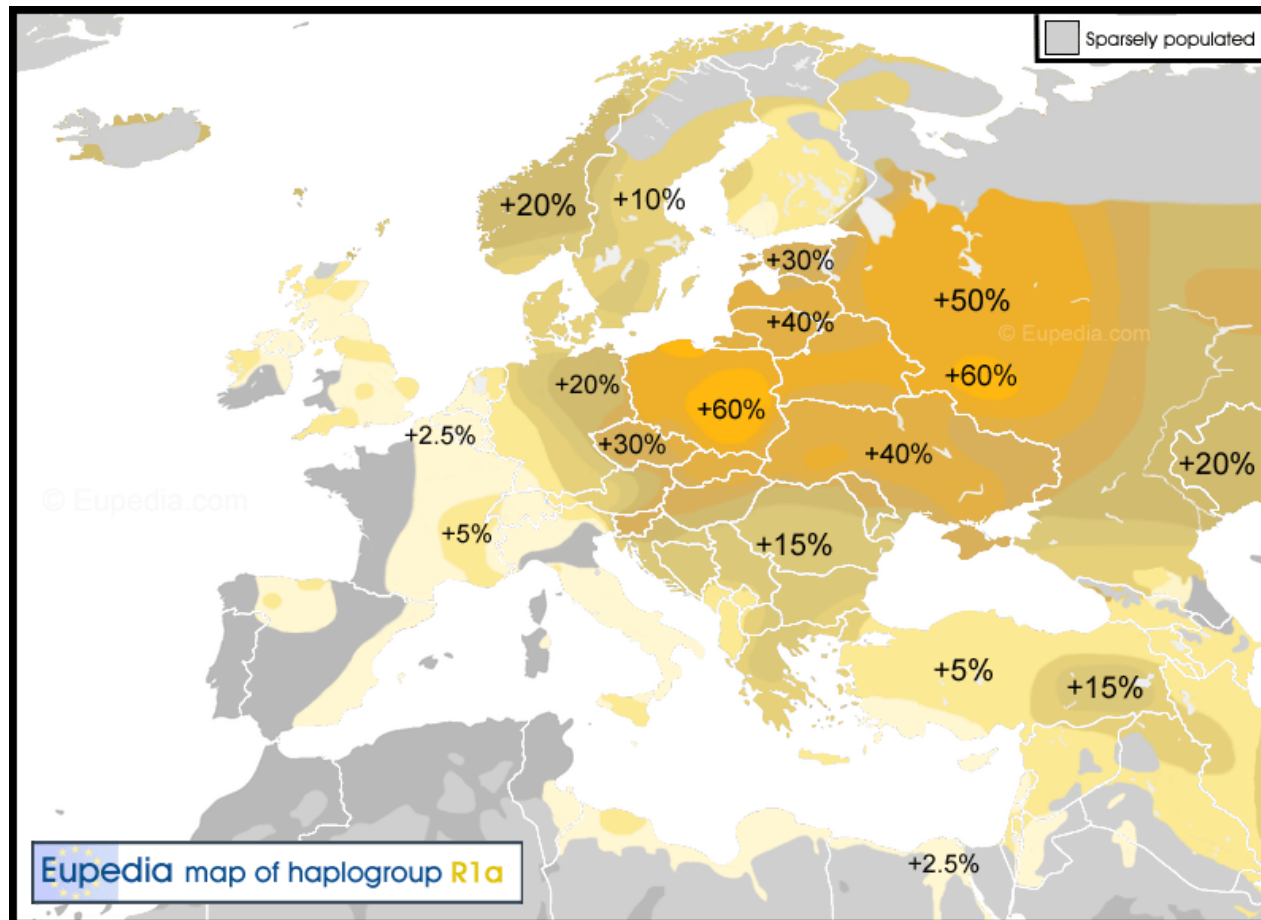

# My Paternal Clade R1b

Lapurdi/Baztan, France	 28%	 52%	 76%	 76%	 76%	 76%

# Information gained from DNA

- Statistics supports origin from 'Celtic' area, particularly Ireland South
- But it's not proof
  - Could theoretically be from other areas with diminishing probability
  - Sample sizes are often small
  - The milkman in Tiverton might have been Irish! (false paternity)
- Relates to 2,500 to 4,000 years ago

# More Recent Information

- DNA STR markers
- 500-2000 years ago

### mtDNA HVR1 and HVR2 Comparison Results

Based on a comparison of **Brian Nicholas Rossiter's** mtDNA HVR1 and HVR2 markers against the HVR1 and HVR2 markers of **Elena Valer'evna Iosilevich**, **Brian Nicholas Rossiter's** HVR1 and HVR2 markers do not match the mtDNA markers found in **Elena Valer'evna Iosilevich's** mtDNA at one location. This suggests that **Brian Nicholas Rossiter** is not closely linked to **Elena Valer'evna Iosilevich** through his maternal line.

Maria Oliver (Nee Holbrook)  
Age: 71 yrs

# Questions on Sarah Jane Dashper

- Surname may be an adaption of an eastern European name (common in 19<sup>th</sup> century)
- Quite a few immigrants came over from eastern Europe in mid-19th century
  - Some were on their way to America but never made it
- Why is she not called a variant of Lena?
- Plymouth would be a natural arrival port
- Needs a lot more research, but she could have been:
  - Yelena Dashpevsky??

# Has DNA been useful?

- It's another point of view, totally independent from the documentary side
  - Always valuable where some subjectivity
- It's added support on paternal side for an Irish origin
- It's initiated a totally new view on maternal side

# Caution/Forward

- Methods are in their infancy
- Statistical tests need great care in interpretation
- Without traditional documentary side, would not like to rely on results
- Suspect that DNA techniques will rapidly advance giving much more refined Subclade information on bigger and better sample sizes
